ACMT

Challenge

It's a tall order to update a standard, publish the update, communicate the update to all the district officials, curriculum providers, and teachers, then actually ensure that lesson plans and teaching materials are synced to the most recent standard.

Solution

ACMT is the first fully-digital authoring and communication platform designed to transform the way states and districts manage and disseminate education competencies and standards.

Learning Impact

This revolutionary standards management platform streamlines, organizes, and connects education competencies and standards to districts, teachers, and vendors.

- Minimize information conflicts, errors, and duplicates by streamlining the entire standards authoring workflow from end-to-end.
- Enable districts and vendors to connect directly to state education departments to receive an automatic notification when a standard is changed or updated.
- Digitally connect customized lesson plans and guides to specific standards so teachers have quick access to up-to-date curriculum examples.
- Create vertically and horizontally aligned standard educational opportunities.
